

CLAIMS

[0064] I claim:

1. An improved hand held scraper handle for accomplishing the task of scraping debris from hard or soft surfaces, comprising:

- (a) a hand held scraper handle having at one end a handle section for gripping and at the opposite end
- (b) a shaft section formed to receive within the said hand held scraper handle
- (c) a blade secured with the assistance of
- (d) an integrated catch and release mechanism forming a complete tool for the purpose of performing scraping tasks and
- (e) said shaft section of the hand held scraper handle having the means to release said blade by means of said integrated catch and release mechanism and
- (f) said hand held scraper handle section having means to store an undetermined amount of spare blades within
- (g) a cavity of sufficient length, width and depth to store an undetermined amount of spare blades which features
- (i) a storage cover that attaches and detaches from the hand held scraper handle section for the purpose of enclosing and securing within said cavity said spare blades and
- (j) said hand held scraper handle having means to attach and detach with the assistance of a integrated catch and release mechanism from
- (k) a sheath formed to receive said hand held scraper handle and
- (l) said sheath having means to release the scraper working

in conjunction with said integrated catch and release mechanism and

- (m) said sheath having sufficient length, width and depth to provide a means to store said scraper within said sheath for the purpose of storage and retrieval and
- (n) said sheath providing a means to facilitate cleaning of said sheath and
- (n) said sheath having means to attach and detach from a pole with the assistance of
- (o) a set of mounting arms that conform to the radius of a pole, whereby said hand held scraper handle and said sheath can be coupled with each other and attaches as one unit with a pole for the purpose of storage and retrieval.

[0065] 2. An improved hand held scraper handle for accomplishing the task of scraping debris from hard or soft surfaces, comprising:

a scraper handle and blade having means to attach and detach from

a sheath and said sheath having the means to attach and detach to a radius.
